

Passing the Infrastructure Investment and Jobs Act Will Create Millions of Jobs and Get Our Economy Moving Again.

5 Ways the Bill Makes the Economy Stronger Through Energy:

Investments in energy infrastructure will contribute a total of over \$104 billion to GDP - a 2x return on investment.

43,000 jobs and over \$32 billion increase to GDP from carbon capture and removal.

27,000 jobs and \$3 billion to GDP from transmission provisions that will create greater reliability and resiliency for the grid.

13,000 jobs from energy efficiency.

10,000 jobs and an increase in \$1.3 billion to GDP from remediation of orphan wells.

Passing the Infrastructure Investment and Jobs Act Accelerates Technology Deployment Leading to Faster and Larger Carbon Emissions Reductions:

Innovation breakthroughs will result in 24% greater reduction in CO₂ emissions in 2050.

Fast-tracked deployment of hydrogen production facilities in the U.S. could avoid 7 million metric tons of CO₂ emissions annually, which is the equivalent of 1.5 million cars driven for one year.

Four regional DAC hubs will be built with a million-ton capacity each, leading to 4 million metric tons of CO₂ removed annually.
